CHISEL PASTE CUSHIONS THE BLOW

Buffalo, NY – Hydraulic breakers need specialized lubrication to protect them from heat, vibration, metal-on-metal damage and unforgiving environmental conditions. These machines operate in extreme heat, dust and moisture, so lubrication needs to protect against corrosion too. Standard grease will separate, evaporate and run off.

Beka-Max Chisel Paste is up to the challenge. Made of copper-infused calcium sulfonate, our chisel paste can lubricate efficiently in temperatures from -20°C to 1,100°C (-4°F to 2,110°F). Designed to reduce wear and extend the life of hydraulic breakers, Beka-Max Chisel paste includes extreme pressure and anti-wear properties. Its shock load and vibration resistance means it will protect your tool even in the most extreme conditions, and in the end, save you money on unnecessary repairs and downtime.

What sets Beka-Max chisel paste apart is its ability to protect against corrosion in wet and salty environments.

Because the lubrication needs to be applied so frequently on a hydraulic breaker – up to every hour during intense use – an automatic lubrication system makes sense. Beka-Max offers auto-lube systems that can be installed on the carriage or the breaker.

About Beka-Max of America Inc.

BEKA is today's leading global brand of automatic lubrication systems for industrial, over-the-road and off-road applications. Since 1927, BEKA has been trusted by equipment manufacturers and owners for high quality innovative central lubrication systems. Across the US, Beka-Max of America Inc. and its dealer network delivers on the BEKA promise of environmentally friendly, trouble-free products that increase component life, reduce repair costs and increase the value of your equipment. We measure our success by your up-time.
